DETAILED ACTION

Specification

1. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or
REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
- (e) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (f) BRIEF SUMMARY OF THE INVENTION.
- (g) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (h) DETAILED DESCRIPTION OF THE INVENTION.
- (i) CLAIM OR CLAIMS (commencing on a separate sheet).
- (j) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (k) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

2. Brief summary of the invention is missing.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 6 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Bortolin et al. (5,037,179).

Bortolin et al., figure 15 and 16, disclose a device comprising a fiber optic bundle (1) having a termination block, an array waveguide (2) having channels (6) internally. The array waveguide positioned adjacent to the termination block, two pins (10) each partially extending into both the termination block and the array waveguide.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 2-5, 7-11 and 13-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bortolin et al. (5,037,179) in view of Applicant's submitted prior art.

Bortolin et al. disclose the claimed invention as described above except for the two retainers having etched grooves.

Applicant's submitted prior art, figure 1, discloses a fiber optic bundle (10) having two retainers (16 and 18) having etched grooves. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have Bortolin et al. to have the grooves made of silicon as taught by Applicant's submitted prior art, in order to provide a substantially strong bonding between the fibers and the grooves.

Regarding claim 3, it is noted that Applicant's submitted prior art, figure 2, discloses the array waveguide has two holes (30) formed by an etch process.

Regarding claims 4-5, 9-10 and 14-15 it is noted that Applicant's submitted prior art, figure 3, discloses a gel (50) dispensed between the termination block and the array waveguide. The gel has an index of refraction substantially similar to that of the channels of the array waveguide.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Shahid discloses an optical fiber connector with enhanced bonding.
